

It is with great pride that Sepor presents its first Sustainability Report: the ideal opportunity to offer a comprehensive overview of the main measures we adopted to do business more responsibly and, at the same time, to highlight the efforts and the synergies we've put in place to achieve this important goal.

Since our establishment, we have identified the protection of the terrestrial and the marine environment as our mission, offering innovative solutions for the collection and the treatment of waste originated from the maritime and industrial activities, for the oil spill response and for the industrial cleaning.

Drawing on over 70 years of history and a strong national presence, we have developed over the years a depth of skills and experiences. This valuable knowledge has facilitated sizable investment in innovation, technologies and continuous advancements critical to responding dynamically to a continuously evolving market.

Stakeholder and territorial engagement are among our core values. This first Sustainability Report accurately portrays the company's efforts to adhere to the United Nations 2030 Agenda and its Sustainable Development Goals (SDGs), demonstrating our dedication to a meaningful partnerships with local communities and other relevant stakeholders.

This report outlines Sepor's environmental, governance and social impacts including our support for local occupation and communities achieved through an our ongoing engagement with stakeholders. Through our integrated process based on cutting-edge technological development and application, Sepor works to maximize resource efficiency in line with circular economy and energy/environmental footprint reduction objectives.

With an emphasis on constant progress, each department at Sepor engaged with the information gathering for this report. Their participation recognized the value of our hands-on approach to continuous improvement. By providing input from their operations, the various business department helped to develop the most comprehensive dataset possible.
